Data Analysis Using Python

In this course, you will learn to extract insights from the data. This course is designed to help you deal with data analysis and data manipulation using the popular python library "Pandas". You will learn powerful functions to present the facts from data in the most straightforward and accurate way.

Instructors:

Curriculum:

•Introduction to Data Analysis

•Importance of Data

•Integrated development environment

•Python Packages

•Python Libraries

•File Formats

•Pandas Library

•Data Cleaning

•Data Manipulation

•Pandas Functions

•Feature engineering

Requirements:

- Interest to learn

- Dedication

- System with good internet connection
